

**Editor's Comment:**

I am pleased to read this wonderful piece of research paper and found that the authors have done good jobs in revising their manuscript based on the scholastic comments/suggestions raised by the reviewers as well as improving the manuscript in a befitting manner. However, there are still some minor mistakes in words and languages as well as formatting/arranging of tables, figures, numerical values (such as values after the decimal, STD, denotation of temperature etc.) which need to be corrected/revised based on the prescribed guidelines of the journal before final printing. In addition, the title should be revised as "Assessments of Water Quality and Plankton Diversity In the Baur Reservoir, Uttarakhand, India" Therefore, I recommend it for publication as a full-length research paper in UTTAR PRADESH JOURNAL OF ZOOLOGY with minor revisions. Hope, you will agree with my decision and also will take needful actions towards its acceptance and publication.
